

## **Open Text Workflow Server, .NET Edition version 6.5 Feature Pack 2**

Open Text is pleased to announce the availability of Feature Pack 2 for Open Text Workflow Version 6.5. This Release is cumulative and contains new fixes plus all the fixes from previous HotFixes. Note that this installation requires the uninstall of any prior version of Workflow.

Open Text Workflow Server, .NET Edition version 6.5 Feature Pack 2 offers support for the latest Microsoft environments.

- Open Text Workflow Server, .NET Edition version 6.5 Feature Pack 2 includes the following updates and changes:
- SQL Server 2008 - Open Text Workflow Server is now supported on SQL Server 2008.
- Updated OLAP Cube - A brand new OLAP cube and Workflow data warehouse now supports SQL 2008 Integration Services. Customized and powerful analysis of Workflow metrics is easy to access from SQL Reporting Services.
- Windows Server 2008 (32-bit) - Open Text Workflow Server .NET Edition supports Windows Server 2008 (32-bit only).
- Windows 7 (32-bit) - Open Text Workflow Server .NET Edition client components supports Windows 7 (32-bit only).
- Vista (32-bit) - Open Text Workflow Server, .NET Edition client components supports Windows Vista (32-bit only).

It contains updates for several customer reported issues including:

- Improved the deploying feature of models with Web Tasks.
- Improved the performance of Task List view in Web Access.
- Fix for defect where MSMQ Triggers were not working.
- Fix for defect that was unable to trigger event task the second time when a new Time based event is set on the first execution of the event task.
- Fix for Task List view which takes a longer time to load with KPI columns and more process.
- Fix for defect where the event service does not release memory after catching the file drop trigger.
- Fix for the error 'unable to create new task list view' when model id is above 64K.
- Fix for Task Properties window where the Completion date display was the same as the Start date.
